

DESIGNED TO ARREST A FALL ALREADY IN MOTION, **COVERSAFE TRENCH IS A FALL-PROTECTION SYSTEM** DESIGNED WITH GRP, IDEAL FOR UTILITY, MAINTENANCE AND GROUNDWORK EXCAVATION COMPANIES.

PREVENT FALLS INTO OPEN TRENCHES WITH A PROTECTION SYSTEM DESIGNED WITH GRP

ADAPTABLE TRENCH COVER

KEY FEATURES & BENEFITS

- Robust cover which is easy to use to prevent falls into trenches
- Formulated with GRP to protect against electrical hazards
- Easy to use and lightweight

CoverSafe Trench is a fall-prevention system formulated with GRP, and is used to prevent falls into open trenches. The GRP material allows the trench cover to be insulated, providing full protection against electrical dangers - whilst being lightweight and extremely durable.

The cover can be fixed down at each corner to ensure extra stability, and the trellis system allows for easy inspection of work without having to remove the mat.

It is easy to install and lightweight so can easily be moved around site by a single operative. It increases safety on site by protecting against electrical hazards.

CoverSafe Trench conforms to BS.8630:2019 safety standards and is suitable for use where there are open trenches such as on construction sites and roads.

AVAILABLE TO **HIRE** AND **PURCHASE**

CURRENTLY USED IN THESE SECTORS

UTILITIES

CONSTRUCTION

SPECIFICATION

Open size	2m x 1.2m for 0.9m trench 2.75m x 0.9m for 0.6m trench
Closed size	1460mm long x 260mm wide
Weight	6.5kg
Maximum working load	180kg (fall arrest system - not to be worked on)

Open sizes are typical because each mat can be adjusted to the best rectangular shape to give the optimum cover for each situation.

Training and maintenance packages available.
