

# CODA BY COMMEND

## Simplified Visitor Management

With just a few clicks, CODA allows you to send your visitors an instant email featuring a randomly generated QR code that can be used to gain access to a secure environment. If the visitor doesn't wish to scan the QR code they can simply tap the included code into the digital pin pad located on the smart intercom.

Codes can be limited to single use or work within specific time frames. Multiple entrances can be configured and assigned to visitors.

CODA is able to track when visitors have arrived and through the Commend system is able to trigger specific events to take place. For example, a PA message can play elsewhere to inform of the visitors arrival. Reports can be generated to detail when visitors were granted access or even if expired codes haven't been used.

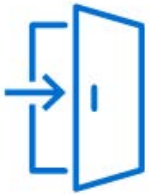

## Secure Visitor Management

The CODA app has user management helping you ensure that visitors can only be created by the appropriate personnel within the business.

## Simple to Use

CODA has a very simple workflow. Add a visitor, enter the details and the visitor will instantly receive a customised email displaying a QR and pin code.

## Multiple Entrances

It is possible to specify more than one entrance to a visitor meaning that routes of access can be created in advance. The visitor just uses the same QR or pin at each entrance.

## Keep Track of Visitors

With CODA it is possible to see at a glance which visitors have been granted access and is also capable of generating reports with custom time periods.

## Customised Email

The email can be customised and the content specified helping you stay GDPR compliant and ensuring that all visitors are informed with instructions for their arrival.

# CODA

## Technical Details

CODA is licenced for use based on 2 entrances. More entrances can be added with additional licences.

CODA is a Windows based application. It runs locally to the installation.

An appropriately specified PC is required. This can be provided by Commend if desired.

The PC running CODA must be connected to the same IP network as the Commend symphony devices to communicate and provide appropriate access when codes are entered or scanned.

An SMTP server is required to enable the email functionality.
