aico®

The Ei1000G **SmartLINK®** Gateway

The smarter way to check every tenant's safety. At any time.

SmartLINK® A Revolution In Tenant Safety

an **Ei** Company

The Alarm management system social landlords have been waiting for.

We know because they told us.

They told us maintaining data for their properties is complex and time-consuming too. That gaining access to properties can be an issue. And that they need the reassurance of compliance to protect their tenants. All of which are designed into the Ei1000G Gateway to make life easier, improve efficiency and reduce costs. It's a revolution in tenant safety.

SmartLINK ®

What exactly is the SmartLINK® Gateway?

An exciting innovation in Fire and Carbon Monoxide safety, the Gateway and Cloud portal use Aico's SmartLINK technology to bring together data from all SmartLINK-enabled alarms in a property in a simple, online dashboard format – so viewing and managing them is easier and more effective. The system also makes alarm maintenance, repair and replacement more efficient by creating alerts for maintenance and fault events.

No cabling or Wi-Fi needed

Real-time anytime reporting

SmartLINK compatible

No property access required after initial installation

**Forecast replacement & maintenance**

Email or SMS notifications

Easy-to-use dashboard

Reduce costs, improve efficiency

How the Ei1000G Gateway works.

The key is Aico's unique SmartLINK technology. Our next-generation Radio Frequency Wireless Interconnection enables each compatible alarm to connect with others in a property with no tricky cable runs. Adding the SmartLINK Gateway also means they can collectively transmit data to the Cloud portal to provide real-time monitoring. The Gateway is a mains-powered roaming 2G GSM-based device with battery back-up too, ensuring the maximum connectivity possible, without the need for local broadband or Wi-Fi services.

Simply plug in Ei3000MRF SmartLINK module for wireless interconnection between alarms and to communicate with the Ei1000G SmartLINK Gateway

Install the Gateway to link to the SmartLINK Cloud Portal and push events from the alarms to it as they happen

Setup the Cloud portal to provide

- Live monitoring of connected SmartLINK alarm systems
- Details of system installations
- Notifications of alarm activations and system events via alert, text message or e-mail

Say goodbye to manual checks, spreadsheets and access issues

The innovative Ei1000G uses SmartLINK wireless interconnection technology to link every alarm in a property to give you the full picture via an online portal, using any device.

Track alarm performance in real-time

The system constantly monitors every linked alarm, giving you real-time updates with notifications sent by email or text if any issues occur – or if an alarm is about to reach end of life and needs replacing.

Easy installation, reliable connection

Rather than Ethernet cabling or Wi-Fi, the Ei1000G uses the best-available mobile network connection to send data to the portal – providing simpler installation and better reliability.

Keep up to date with safety.

Just look at your dashboard. The real-time data fed from the alarms via the Gateway to the Cloud portal can be viewed on any device and configured to suit you. The dashboard acts as a hub, keeping you up to date with any alarm events or maintenance information, with features including:

- Real-time alarm status
- Fault status
- Text alert and e-mail notification for both Fire/CO and fault events

- Installation reports
- Replacement and fault reports

Easy-to-use dashboard format

Collated data is presented in a simple configurable format with sufficient detail to drill deeper using various reporting tools to analyse a properties' Fire and CO alarm performance.

Forecast replacement and maintenance

The reporting tools not only allow events to be checked, but also accurately forecast alarm replacement and maintenance – helping to ensure your tenants are always protected.

Identify trends in alarm notifications

Alarm notification trends also help to highlight other potential problems – e.g. if a CO Alarm is regularly activated early in the morning, it could point to an issue with the heating system.

About Aico.

The UK Market Leader in domestic Fire and Carbon Monoxide protection.

Aico, an Ei Company, specialises in pioneering new alarm technologies and works closely with Installers, Specifiers, Landlords, Local Authorities, Housing Associations and their tenants to create safer living environments. Each Aico alarm has been designed, developed and manufactured at our factory in Ireland, and is thoroughly tested throughout manufacture to meet every UK standard. We also provide full nationwide technical support offering advice on alarm selection, siting, installation and maintenance.
