

DESIGNED TO PROVIDE A **SAFE WORKING PLATFORM THAT DOESN'T BLOCK ACCESS TO STAIRS**, WHILE ALSO ACTING AS A FALL PREVENTION SYSTEM. STAIRSPAN CAN BE USED BY ALL TRADES WORKING ON DOMESTIC STAIRS AND STAIRWELLS DURING CONSTRUCTION AND PROTECTS WORKERS FROM FALLING INTO STAIRWELLS, VOIDS, OR DOWN STAIRWAYS.

## IMPROVE PRODUCTIVITY AND SAFETY BY CREATING A SAFE PLATFORM TO WORK FROM

### STAIRWELL PLATFORM SYSTEM

#### KEY FEATURES & BENEFITS

- Quick and easy to install in under 10 minutes with just four components
- Temporary work platform and fall prevention system
- Allows easy access and movement in stairwells in this dangerous and awkward area

The StairSpan stairwell protection system increases productivity when working at height in stairwells by providing a safe, sturdy platform to work from whilst preventing falls. Built using lightweight aluminium makes it easy to transport and its flexible design allows for work to continue without blocking access to the stairs. The mat can easily be slid back to allow access for operatives and materials.

Consisting of just four components, it can be easily installed by a single operative and is quick to construct in a matter of minutes. The telescopic frame can be adjusted to many different lengths making it adaptable for even the most complex of stairways.

To show just how adaptable the StairSpan is, it can be used when the staircase is not yet fitted, in stair voids by removing the hinged legs from the frame. This can be performed when the joists have just been fitted prior to the staircase being installed.

The StairSpan system conforms to BS.8630:2019 safety standards and comes in two sizes, standard and a compact version. Using additional accessories can solve special stairway problems.

AVAILABLE TO **HIRE** AND **PURCHASE**
