

Dorgard & Freedor Hold Fire Doors Open Legally and Safely

Wedging or propping fire doors open is dangerous. Dorgard and Freedor offer a cost-effective and safe solution.

Fireco Dorgard & Freedor are an Approved, Legal Solution

Choose from a [Dorgard Fire Door Retainer](#) fitted to the base of your fire door, or a [Freedor Free-Swing Door Closer](#) which can replace your existing self-closing device at the top of your fire door.

Dorgard Fire Door Retainers

The Dorgard is easily fitted to the base of your fire door and allows the door to be held open in any position using a rubber plunger. Dorgard listens for the sound of your existing fire alarm and when it hears the alarm, it releases the fire door automatically, ensuring it closes.

Install a Dorgard Fire Door Retainer and Benefit From:

- ✓ Improved accessibility for everyone
- ✓ Improved ventilation in buildings
- ✓ Free extended 5 year warranty from Safelincs
- ✓ Easy foot-operated setting and release
- ✓ No wiring and easy installation

For noisy environments, the **Dorgard SmartSound** model is also available. It 'learns' the sound of your fire alarm, making it less prone to false alarms from background noise.

Freedor SmartSound Free-Swing Door Closer

The Freedor SmartSound allows your fire door to swing freely into any position like a normal door. It can also hold open the fire door in any position but will ensure the fire door closes every time the fire alarm sounds. Fit the battery powered, wireless device to either side of the door leaf.

Install a Freedor SmartSound and Benefit From:

- ✓ Improved accessibility for everyone
- ✓ Improved ventilation in buildings
- ✓ No wiring or additional floor or wall fittings required
- ✓ New SmartSound technology reduces the likelihood of false activations
- ✓ Low maintenance with a long battery life and 3 year warranty

Self-installation

Dorgard Fire Door Retainers and Freedor Door Closers can be easily installed by anyone with a basic knowledge of DIY. Both devices are wireless and battery powered and so do not require an electrician to fit them. Once fitted to the door they can be quickly tuned to the sound of your fire alarm.

Safelincs Installation Service

Our trained engineers can provide an installation service should you require. This is popular with larger organisations who require many devices to be fitted. Our professional fitters will visit your site anywhere in the UK and will fit your devices with minimal disruption to your organisation.

Why Can't Fire Doors be Wedged or Propped Open?

Fire doors are an important part of the fire safety strategy for many organisations. But, if a fire door is propped or wedged open, it will not close when a fire starts and will not prevent the fire from spreading or protect the occupants. Your insurance could be invalidated and you could suffer a fine or prison sentence.

Dorgard and Freedor from Fireco are a Legal Solution

Remove the temptation to prop or wedge fire doors open illegally by installing a Dorgard Fire Door Retainer or Freedor SmartSound Closer. Fire doors are a necessity in many buildings but are cumbersome and heavy to operate.

Install Dorgard or Freedor to improve:

- ✓ Fire door safety
- ✓ Ventilation throughout your premises
- ✓ Accessibility for everyone including those in a wheelchair or with mobility impairments
- ✓ Feelings of social inclusion

Pro Fire Door Retainer System

Ideal for large premises such as schools, hospitals and factories, the Pro Fire Door Retainer System allows you to centrally control all Dorgard and Freedor devices throughout your organisation.

How Does it Work?

The Pro system is connected directly to your existing fire alarm using the ProHub transmitter. When the fire alarm sounds, the ProHub communicates wirelessly with your Dorgard Pro or Freedor Pro devices, ensuring that all fire doors close automatically.

Install Pro Fire Door Retainer System and Benefit From:

- ✓ Central monitoring and control of all devices in your premises
- ✓ Easy maintenance - the ProHub communicates if any devices require attention
- ✓ Remote monitoring using the InSite software - check the live status of the system from your mobile phone or laptop, anywhere in the world
- ✓ Versatile system suitable for very large premises and noisy environments
- ✓ Connect up to 500 devices in one system
- ✓ Peace of mind with our exclusive 7 year warranty

Why Choose Safelincs?

With Safelincs, you can expect:

- Excellent customer service from an award winning British company
- High quality products at competitive prices
- Great service from a company who are committed to reducing waste and creating sustainable environmental solutions where possible

Excellent service and products. My business specialises in a particular type of property maintenance and I was asked to source door stops for some of 31 fire doors we fitted. Purchased 6 (Dorgard) units at a very competitive price which were promptly delivered and easy to fit.

Case Study: Enrich Learning Trust

As an education provider, the Trust takes its fire safety responsibilities seriously with self-closing fire doors installed throughout its premises. Covid-19 has increased the need for ventilation and they were looking for a solution to legally and safely hold open fire doors throughout their buildings.

Safelincs were selected to supply a total of **153 Dorgards**. Peter Jordan, the Trust's COO commented that Safelincs was, "able to offer a competitive price, quick, flexible delivery and installation where required."

North Walsham High School (part of the trust) had **64 Dorgards** installed. Facilities manager Paul Essam: "The installation was carried out quickly and efficiently; the team were so efficient and the whole job caused no extra work for our team."
